

ATS1250/1260

ATS 4-Door Controller

The ATS1250/1260 4-Door/Lift controller is a versatile access control panel to extend the ATS system with advanced access control functions. The ATS1250/1260 4-Door/Lift controller can be connected to the ATS3000 and ATS4000 control panels, giving the user up to 48 additional doors.

ATS7300

ATS GSM Module for Reporting and U/D

The ATS7300 GSM module is directly connected to the ATS panel and fully enables alarm reporting and up- and down-loading to TITAN via GSM. All reporting formats available through PSTN are available via GSM, including voice reporting or audio listen-in. The GSM module can be used for primary reporting as well as back-up reporting (using multiple central stations).

ATS1806

ATS Universal Interface for an Ethernet based IP connection

The ATS1806 Universal Interface acts as a gateway between an ATS alarm panel and the outside world. It includes an embedded web server to enable the installation technician to program all the necessary configuration options of the Universal Interface by means of a web browser on a computer. The Universal Interface enables an ATS control panel to communicate with the monitoring station and/or security management systems via the internet protocol (IP).

GE Security

ATS family of control panels

ATS is GE Security's new family of control panels and peripherals, engineered to become the backbone of your security system.

The versatile design of ATS means that it can be used for commercial applications ranging from high-street stores or professional practices to office and government buildings, banks, post offices, schools supermarkets, distribution centres and many other locations.

With Intrusion, Access Control and CCTV integration in one platform ATS gives users 24/7 effective security. The ATS family is not only flexible enough to meet any particular needs, it is also designed to expand as your security needs grow.

And that is security you can feel secure about.

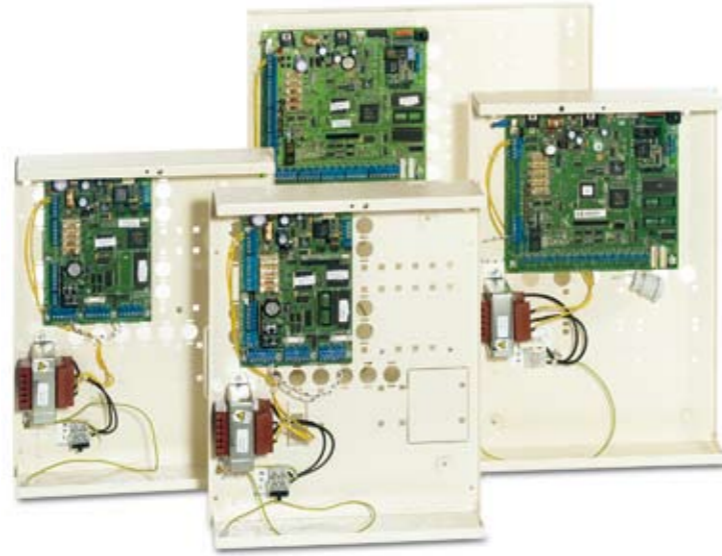

ATS Control Panel Family

ATS2000/3000/4000/4500

ATS is a family of 4 control panels (ATS2000/3000/4000/4500) that all share the same software, accessories and manuals, only differing in their database and enclosure sizes.

A maximum of 256 zones can be programmed to operate over 16 independent areas. Zones may be assigned to a specific area (offices, stores, etc.) or common to all (reception, canteen, etc.) Each area may have its own separate keypad or reader.

All the ATS panels can control 16 doors and feature the exclusive "3 times badging" to arm. The ATS3000 and up allow the user to control a further 48 doors by connecting the panels to optional 4-Door Controllers.

ATS1115

ATS 16 Area Keypad

The ATS1115 is part of the Remote Arming Station (RAS) family for the ATS security system. The RAS family consists of a range of keypads and card readers. The ATS1115 can be used for configuration and management of the systems, as well as for opening doors and arming/disarming areas. In addition, the ATS1115 can easily give the user a status overview from the security system with both visual and audio indicators.

The ATS1115 has a modern ergonomic design and a clearly readable text on a 2 x 16 characters LCD for displaying system programming, alarm and access control functions. The contrast of the display is adjustable via the keypad as well as the volume level of the built in buzzer.

ATS1190 & ATS1192

ATS Smart Card Readers

The ATS1190 and ATS1192 smart card readers give users easy, yet secure access to buildings or areas, which they are authorized to enter.

The ATS1190 is ideal for indoor use and is supplied with a standard white removable dress cover, which can be interchanged with one of four other available colours.

The ATS 1192 is a heavy-duty smart card reader, which is ideal for outdoor use due to its full epoxy filled weatherproof construction.

ATS1197

ATS Smart Card Reader with Keypad

The ATS1197 smart card reader and keypad is ideal for outdoor applications in high security sites where a combination of card and pin is required for access.

ATS1151, ATS1155 & ATS1156

ATS Aluminium Keypads

The ATS1151, ATS1155 and ATS1156 keypads are part of the Remote Arming Station (RAS) family for the ATS security system and can be mounted beside, which the user wishes to control.

The keypads are mounted in an aluminium housing, which protects them against vandalism. The ATS1151 and ATS1156 have engraved stainless steel keys and built-in heaters to keep the units ice-free if used in cold environments (i.e. wine cellar). The keypads are fully protected by a tamper contact, which will transmit an alarm to the controller if opened.

In addition, the ATS1156 keypad is equipped with a mag stripe card reader. Anyone requesting access must either enter their security code or swipe their magnetically encoded card through the slot on the reader.
